## Principles of Paleontology By Michael Foote, Arnold I. Miller

When published in 1971, *Principles of Paleontology (POP)* by David Raup and Steven Stanley revolutionized both textbooks and teaching in paleontology by adopting an approach that focused on the **process of studying biologic groups**, rather than a **systematic approach** (the study of individual groups of organisms), or an **historical approach** (narrating events to date). For this highly anticipated revision of Raup and Stanley's one-term undergraduate text, two of Raup's former students—Michael Foote and Arnold Miller—use that defining core approach to present a thoroughly up-to-date portrait of a field that has undergone major transformations in the last two decades.
