Editorial Review

From the Back Cover

Written by one of the leading archaeological writers in the world--in a simple, jargon-free narrative style--this brief, well-illustrated account of the major developments in the human past (from the origins of humanity to the origins of literate civilization) is ideal for those with no previous knowledge of the subject. Up to date and state of the art in content and perspective, it covers the entire world (not just the Americas or Europe), placing major emphasis on both theories and the latest archaeological and multidisciplinary approaches. The main focus is on four major developments--the origins of humanity; the appearance and spread of modern humans before and during the late Ice Age, including the first settlement of the Americas; the beginnings of food production; and the rise of the first civilizations. Features special boxes on Science (e.g., key dating methods and other scientific approaches), Sites (e.g., sites of unusual importance or interest, and Voices (e.g., quotes from writings of ancient times). Human Origins. African Exodus. Diaspora. The Origins of Food Production. The First Farmers. Chiefs and Chiefdoms. State-Organized Societies. Mesopotamia and the Eastern Mediterranean World. Egypt and Africa. South, Southeast, And East Asia. Lowland Mesoamerica. Highland Mesamerica. Andean Civilizations. For anyone interested in Archaeology, World Prehistory, Human Antiquity.

About the Author

Brian Fagan is one of the leading archaeological writers in the world and an internationally recognized authority on world prehistory. He studied archaeology and anthropology at Pembroke College, Cambridge University, and then spent seven years in sub-Saharan Africa working in museums and in monument conservation and excavating early farming sites in Zambia and East Africa. He was one of the pioneers of multidisciplinary African history in the 1960s. From 1967 to 2003, he was Professor of Anthropology at the University of California, Santa Barbara, where he specialized in lecturing and writing about archaeology to wide audiences. He is now Emeritus.

Professor Fagan has written six best-selling textbooks apart from this book: *Ancient Lives: An Introduction to Archaeology*; *In the Beginning*; *Archaeology: A Brief Introduction*; *People of the Earth*; *World Prehistory*, all published by Prentice Hall?that are used around the world. His general books include *The Rape of the Nile*, a classic history of Egyptology; *The Adventure of Archaeology*; *Time Detectives*; *Ancient North America*; *The Little Ice Age*, *The Long Summer*, and *Fish on Friday*. He is General Editor of the *Oxford Companion to Archaeology*. In addition, he has published several scholarly monographs on African archaeology and numerous specialized articles in national and international journals. He is also an expert on multimedia teaching and has received the Society for American Archaeology's first Public Education Award for his indefatigable efforts on behalf of archaeology and education.

Brian Fagan's other interests include bicycling, sailing, kayaking, and good food. He is married and lives in Santa Barbara with his wife and daughter, four cats (who supervise his writing), and, last but not least, seven rabbits.

Three thousand, four thousand years maybe, have passed and gone since human feet last trod the floor on which you stand, and yet, as you note the signs of recent life around you—the half-filled bowl of mortar for the door, the blackened lamp, the finger-mark on the freshly painted surface, the farewell garland dropped on the threshold—you feel it might have been but yesterday ... Time is annihilated by little intimate details such as these, and you feel an intruder.

Egyptologist Howard Carter, notebook entry on Tutankhamun's tomb, November 26, 1922

Golden pharaohs, lost cities, grinning human skeletons: Archaeology is the stuff of romance and legend! Many people still think of archaeologists as adventurers and treasure hunters, like Indiana Jones of Hollywood movie fame seeking the elusive Holy Grail. This enduring image goes back to the late nineteenth century, when archaeologists like Heinrich Schliemann could still find lost civilizations like Troy and excavate three royal palaces in a week. Today, few, if any, archaeologists behave like Indiana Jones. They are scientists, not adventurers, as comfortable in an air-conditioned laboratory as they are on a remote excavation. The development of scientific archaeology from its Victorian beginnings ranks among the greatest triumphs of twentieth-century science.

Archaeology has changed our understanding of the human experience in profound ways. A century ago, most scientists believed humans were no more than 100,000 years old. Today we know that our origins go back at least 5 million years. Our predecessors assumed the Americas were settled in about 8000 B.C. and that farming began around 4000 B.C. New excavations date the first Americans to at least 12,000 B.C. and the beginnings of agriculture to about 10,000 B.C. Most important, archaeology has changed our perceptions of ourselves, especially of our biological and cultural diversity. Welcome to the fascinating world of archaeology!

The sixth edition of *World Prehistory* continues a long tradition of providing an interesting, jargon-free journey through the 5-million-year-old landscape of the human past. I hope you enjoy your sojourn in its pages.

Highlights of the Sixth Edition

The sixth edition of *World Prehistory* has been revised throughout to reflect the latest advances in the field. It includes suggestions by dozens of archaeologists and students who have taken the trouble to contact me after using previous editions.

This is an exciting time to be writing about archaeology. Many scientific advances are changing our perceptions about the past. The sixth edition contains important new discoveries about early human evolution, the late Ice Age, and the origins of agriculture. New and updated coverage of the field appears in every chapter, with an up-to-date Guide to Further Reading at the end of the book along with a glossary of technical terms and one of archaeological sites and cultural names.

Updating and Rewriting

- *New perceptions of world prehistory.* Chapter 1 includes important discussions of archaeology and alternative perspectives on the past, reflecting new thinking on this important topic.
- *Early human evolution.* Chapter 2 discusses the latest advances in the study of human origins, including the latest fossil discoveries in Ethiopia and Kenya, among them *Sahelanthropus tchadensis* and *Australopithecus garhi*, both confusing and enigmatic predecessors of humanity.
- *Origins of modern humans.* Chapter 3 covers new research into the controversial issue of the earliest modern humans and fresh perceptions of Neanderthal ancestry and behavior.
- *Origins of food production.* Chapter 5 incorporates expanded coverage of the latest theories on the origins of agriculture and animal domestication. Chapter 6, which describes the first farmers, incorporates new dates for early agriculture obtained from accelerator mass spectrometry (AMS) radiocarbon dates and the results of new research in eastern Turkey, where some of the earliest farming settlements in the world are being found.
- *Origins of states and civilization.* Chapter 8 includes current theoretical debates on the origins of state-organized societies, including the issues of factionalism and charismatic leadership. Chapters 9 to 14 offer an up-to-date description and analysis of the first civilizations, with expanded coverage of ancient Egyptian

civilization and of South and Southeast Asian states. Chapters 12 and 13 offer more comprehensive analysis of highland and lowland Mesoamerican civilizations than in previous editions.

- *Revision and updating throughout.* The entire text and Guide to Further Reading have been revised and updated on a page-by-page basis.

Boxes

Three types of in-text boxes enhance the book, designed to amplify the narrative:

- *Science.* These boxes introduce key dating methods and other scientific approaches, such as radiocarbon and AMS dating, and also environmental reconstruction.
- *Sites.* Each chapter includes one or more boxes describing sites of unusual importance, and some aspects of unusual interest.
- *Voices.* The Mesopotamian, Egyptian, and highland Mesoamerican chapters include special boxes that quote from writings of ancient times, giving each an unusual "voice."

New and Revised Art Program

The sixth edition's art program has been revised with new photographs and fresh or revised line art. The new illustrations provide additional background on recent discoveries, amplify the narrative, or replace older art with new pictures. Some expanded captions serve to integrate the illustrations more closely into the text.

Complete Redesign

The entire book has been completely redesigned to make it more user-friendly.

Ancillary Materials

The ancillary materials that accompany this textbook have been carefully created to enhance the topics being discussed.

Instructor's Manual with Tests. For each chapter in the text, this manual provides a detailed outline, list of objectives, discussion questions, classroom activities, and additional resources. The test bank includes multiple choice, true-false, and essay questions for each chapter.

Companion Website™. In tandem with the text, students and professors can now take full advantage of the World Wide Web to enrich their study of archaeology. The Fagan *Companion Website™* correlates the text with related material available on the Internet. Features of the *Companion Website™* include chapter objectives and study questions, as well as links to interesting material and information from other sites on the Web that can reinforce and enhance the content of each chapter. **Address:** www.prenhall.com/fagan

Research Navigator™. *Research Navigator™* is the easiest way for students to start a research assignment or research paper. Complete with extensive help with the research process and three exclusive databases of credible and reliable source material, including EBSCO's *ContentSelect™* Academic Journal Database, *The New York Times* Search-by-Subject Archive, and *Best of the Web* Link Library, *Research Navigator™* helps students quickly and efficiently make the most of their research time.

Prentice Hall Guide to Evaluating Online Resources, Anthropology. This guide encourages students to be critical consumers of online resources. References related specifically to the discipline of anthropology are included. Included with the guide is an access code for *Research Navigator™*. This guide is free when packaged with *World Prehistory, Sixth Edition*.
