**Handbook of Natural Gas Transmission and Processing, Third Edition: Principles and Practices** By Saeid Mokhatab, William A. Poe, John Y. Mak

Written by an internationally-recognized author team of natural gas industry experts, the third edition of *Handbook of Natural Gas Transmission and Processing* is a unique, well-documented, and comprehensive work on the major aspects of natural gas transmission and processing. Two new chapters have been added to the new edition: a chapter on nitrogen rejection to address today's high nitrogen gases and a chapter on gas processing plant operations to assist plant operators with optimizing their plant operations. In addition, overall updates to *Handbook of Natural Gas Transmission and Processing* provide a fresh look at new technologies and opportunities for solving current gas processing problems on plant design and operation and on greenhouse gases emissions. It also does an excellent job of highlighting the key considerations that must be taken into account for any natural gas project in development.

- Covers all technical and operational aspects of natural gas transmission and processing in detail.
- Provides pivotal updates on the latest technologies, applications and solutions.
- Offers practical advice on design and operation based on engineering principles and operating experiences.

## **Editorial Review**

### **Review**

“This handbook is a valuable reference that covers all aspects of the natural gas transmission and processing industries. It contains much needed design, operation and optimization information, all in a single source and does an excellent job of highlighting the key considerations for any gas processing project, as well as providing innovative solutions in NGL recoveries and treating high nitrogen and carbon dioxide content gases in unconventional gas plants. It is a key addition to any gas processing professional's library.” **Jason Kraynek, Vice President of Business Transformation & Innovations, Fluor, USA**

“This well-balanced handbook is the only book of its kind, covering all aspects of natural gas transmission and processing in more details. I believe it will serve as a valuable desk reference for practicing gas engineers and technologists, and as a text for graduate students in the gas engineering curriculum.” **Dr. J.C. Kuo, Senior Advisor of Gas Team, Process Engineering, Chevron ETC, USA**

“This high quality, comprehensive book gives an accurate picture of where the natural gas transmission and processing industry stands today, and describes some relatively new technologies that could become important in the future. I recommend this book for any professional gas processing engineer and technologist.” **David Messersmith, Bechtel Fellow and Manager of LNG Technology and Services Group, Bechtel OG&C, USA**

“This is the only book that covers all technical and operational aspects of natural gas transmission and processing as well as subject areas missed by other similar references. I recommend that if you work in the natural gas industry, you have this unique reference available.” **Dr. Jaleel V. Valappil, Manager - Advanced Simulation/Process, Bechtel OG&C, USA**

“This is a valuable handbook to both the experienced engineer and the graduate just commencing in natural gas engineering. It provides practical advice for design and operation based on sound engineering principles and established techniques as well as introducing process solutions based on new and emerging technologies.” **Adrian Finn, Manager of Process Technology, Costain Natural Resources, UK**

“This book does an excellent job of describing the fundamental handling of natural gas from the wellhead to the consumer. I particularly found the segment on natural gas liquids recovery most informative. I plan to make this very informative publication available to my employees as an excellent training tool as well.” **Randy Johnson, Operations Manager-LNG, Energy Transfer, USA**

“Must have book for anyone in the Gas Processing Industry. The authors did an incredible job at covering the process dynamics and introducing control theories for optimal operation. Absolutely enjoyed the descriptive nature of the chapters without compromising technical details.” **Cesar A. Felizzola, Process Control Engineer, South Region Engineering, DCP Midstream, USA**

“This comprehensive book provides in-depth coverage of all technical aspects of natural gas transmission and processing, beyond those addressed in other books. This is a ‘must addition’ to library of anyone working in the midstream and downstream sectors of natural gas utilization to achieve higher career goals. I commend the authors’ continuous effort to make it an excellent source book for all professionals, engineers, and scientists in the natural gas industry.” **Dr. Suresh C. Sharma, ONEOK Chair Professor and Director**

## **of Natural Gas Engineering and Management, University of Oklahoma, USA**

“This comprehensive book provides a state-of-the-art treatment of the different aspects of natural gas transmission and processing from the fundamental principles to the latest technology developments. It is a unique reference for all professionals involved in natural gas industry and an excellent textbook for graduate programs on the subject.” **Dr. Valerio Cozzani, Professor of Chemical Engineering and Director of Post-Graduate Program on Oil & Gas Process Design, University of Bologna, Italy**

“This unique handbook, written by internationally renowned gas-engineering experts, is a major contribution to the professional and scholarly literature, offering an excellent coverage of key topics in the natural gas supply chain. It addresses the principles, practices, advanced technologies, new issues and challenges related to the natural gas transmission and processing industry, which have not been addressed in depth in any existing books. I recommend it highly, as a reference and textbook.” **Dr. Brian F. Towler, Professor and Chair of Petroleum Engineering, University of Queensland, Australia**

### **About the Author**

Saeid Mokhatab is one of the most recognizable names in the natural gas community through his contributions to advancing the technologies in the natural gas processing industry. He has worked in a variety of senior technical and managerial positions with major petroleum companies and has been actively involved in several large-scale gas-field development projects, concentrating on design, precommissioning and startup of processing plants. He has presented numerous invited lectures on gas processing technologies, and has authored or co-authored over 200 technical publications including two well-known Elsevier’s handbooks, which are considered by many as major references to be taken into account for any gas processing/LNG project in development. He founded the world’s first peer-reviewed journal devoted to the natural gas science and engineering (published by Elsevier, USA); has held editorial positions in many scientific journals/book publishing companies for the hydrocarbon processing industry; and served as a member of technical committees for a number of professional societies and famous gas-processing conferences worldwide. As a result of his outstanding work in the natural gas industry, he has received a number of international awards/medals including the Einstein Gold Medal of Honor and Kapitsa Gold Medal of Honor; and his biography has been listed in highly prestigious directories.

William A. “Bill” Poe is a Senior Principal Technical Consultant at the Invensys Division of Schneider Electric, USA. He has over 30 years of international business and industrial experience in design, operations and project management of gas processing plants with a special focus on automation, multivariable predictive control (MPC), advanced process control (APC), optimization design and implementation, and real-time performance monitoring. Bill started his career at Shell Oil Company, USA, in 1981, working over a decade in natural gas processing plants operations and engineering as well as management of multimillion-dollar projects. In 1993, he joined Continental Controls to lead the process engineering department in support of executing contracts with the Gas Research Institute, USA, where he developed new multivariable control applications in the natural gas industry. After joining GE as part of the Continental Controls acquisition, he became vice president of this division of GE where his responsibilities included direction of product development, projects, technical sales support, and customer service for multivariable control and optimization applications in the natural gas industry. In 2001, Bill joined Invensys Process Systems, USA, where he has developed APC and Optimization Master Plans for international companies such as Saudi Aramco, ADNOC, Statoil, and PDVSA, as well as automation and advanced process control feasibility studies for over 100 natural gas processing plants worldwide. Bill is an Associate Editor of the Journal of Natural Gas Science & Engineering, has authored or co-authored more than 50 technical papers, and made numerous technical presentations at prestigious international conferences. He received the GE Innovators Award in 1999 and attained the Invensys Circle of Excellence in 2011.

John Y. Mak is a Senior Fellow and Technical Director at Fluor, USA, and leads the technology and design development for the chemical and energy sectors at Fluor. He has been with Fluor for over 40 years and has been leading domestic and global oil and gas and refinery projects from conceptual design, feasibility study, FEED and detailed engineering to plant startup and operation. John has made significant contributions to the technologies in natural gas treating, NGL recovery, LNG liquefaction and regasification, coal gasification and carbon capture. He is the co-author of the *Handbook of Liquefied Natural Gas - 1st edition* (2013) published by Elsevier, USA, and has presented over 60 technical papers at the GPA (Gas Processors Association) and LRGCC (Laurance Reid Gas Conditioning Conference), China Coal Forum and other technical conferences. John is the inventor of over 80 patent and patent-pending processes, which have been used in projects at Fluor. His patented technologies have been proven to improve energy efficiency, lower emissions, and reduce cost for many of his clients. John's current focus is on liquid recovery for shale gas projects and treating of the difficult gases, such as the high carbon dioxide and nitrogen content gases for offshore projects.

## Users Review

### From reader reviews:

#### **Steven Whitney:**

Book is definitely written, printed, or outlined for everything. You can understand everything you want by a reserve. Book has a different type. We all know that that book is important factor to bring us around the world. Adjacent to that you can your reading expertise was fluently. A e-book *Handbook of Natural Gas Transmission and Processing, Third Edition: Principles and Practices* will make you to always be smarter. You can feel far more confidence if you can know about everything. But some of you think in which open or reading the book make you bored. It is not necessarily make you fun. Why they might be thought like that? Have you searching for best book or suitable book with you?

#### **Fred Ashman:**

This *Handbook of Natural Gas Transmission and Processing, Third Edition: Principles and Practices* is great guide for you because the content and that is full of information for you who all always deal with world and also have to make decision every minute. This kind of book reveal it facts accurately using great coordinate word or we can state no rambling sentences included. So if you are read that hurriedly you can have whole info in it. Doesn't mean it only provides straight forward sentences but difficult core information with attractive delivering sentences. Having *Handbook of Natural Gas Transmission and Processing, Third Edition: Principles and Practices* in your hand like having the world in your arm, data in it is not ridiculous just one. We can say that no guide that offer you world with ten or fifteen moment right but this reserve already do that. So , this can be good reading book. Hello Mr. and Mrs. hectic do you still doubt which?

#### **Clara Gay:**

Reading a book for being new life style in this calendar year; every people loves to go through a book. When you read a book you can get a large amount of benefit. When you read guides, you can improve your knowledge, mainly because book has a lot of information onto it. The information that you will get depend on what kinds of book that you have read. If you wish to get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, this kind of

us novel, comics, and also soon. The Handbook of Natural Gas Transmission and Processing, Third Edition: Principles and Practices provide you with a new experience in reading a book.

**Frank Quintana:**

What is your hobby? Have you heard in which question when you got pupils? We believe that that problem was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. So you know that little person such as reading or as reading through become their hobby. You need to know that reading is very important as well as book as to be the factor. Book is important thing to incorporate you knowledge, except your teacher or lecturer. You find good news or update concerning something by book. Amount types of books that can you take to be your object. One of them is actually Handbook of Natural Gas Transmission and Processing, Third Edition: Principles and Practices.
