SAS for Linear Models, Fourth Edition By Ramon C. Littell, Walter W. Stroup, Rudolf J. Freund

This clear and comprehensive guide provides everything you need for powerful linear model analysis. Using a tutorial approach and plenty of examples, authors Ramon Littell, Walter Stroup, and Rudolf Freund lead you through methods related to analysis of variance with fixed and random effects. You will learn to use the appropriate SAS procedure for most experiment designs (including completely random, randomized blocks, and split plot) as well as factorial treatment designs and repeated measures. SAS for Linear Models, Fourth Edition, also includes analysis of covariance, multivariate linear models, and generalized linear models for non-normal data. Find inside: regression models; balanced ANOVA with both fixed- and random-effects models; unbalanced data with both fixed- and random-effects models; covariance models; generalized linear models; multivariate models; and repeated measures. New in this edition: MIXED and GENMOD procedures, updated examples, new software-related features, and other new material.

This book is part of the SAS Press program.

Editorial Review

Review

The major enhancement in the fourth edition involves the addition of substantial information and detailed examples on mixed models using PROC MIXED as well as thorough comparisons of PROC MIXED and PROC GLM analyses. It serves as an excellent introduction to PROC MIXED for the most common mixed-models situations (nested, two-way cross-classifications, split-plots, models with mixtures of crossed and nested effects and repeated measures), using classical random-effects assumptions. There are good discussions about random versus fixed effects, problems with unbalanced data or missing cells, techniques or analysis. --Leigh W. Murray, University Statistics Center

The authors aim to write a book that offers a broad coverage of regression and ANOVA models. They have completed the mission. The first chapter, 'Introduction,' is clear and should be read first to get a sense of the road map to the linear models. Because of the breadth rather than depth of its content, it fits intermediate users; however, advanced users may use it for quick reference. That is, this book is good for an overview as well as a reference. The whole book is user friendly, and it is easy to follow the content. Its special feature is the comparison of current advancements in selecting methods (such as PROC ANOVA and PROC GLM) for analyzing linear models. I highly recommend this book for ANOVA/SAS courses. --Mayling M. Chu, Ph.D., California State University, Stanislaus

This is a book for the statistically sophisticated SAS software user. The coverage is quite broad, starting with a brief review of basic regression ideas and extending through mixed models and generalized linear models, including Poisson models, logistic models, models that use quasi-likelihood and generalized estimating equations. Advanced concepts are presented in a user-friendly way and interesting relevant examples are presented. --David A. Dickey, North Carolina State University

About the Author

Ramon C. Littell, Ph.D., Professor of Statistics at the University of Florida, is the coauthor of several books, including SAS System for Regression, Third Edition, and SAS for Linear Models, Fourth Edition. He has worked with SAS software since 1986.

Walter W. Stroup, Ph.D., is currently professor in the Department of Statistics at the University of Nebraska. His responsibilities include teaching statistical modeling, design of experiments, and research applications of mixed models in collaboration with researchers in agriculture, natural resources, medical and pharmaceutical sciences, education, and the behavioral sciences. Dr. Stroup received a B.A. degree in psychology from Antioch College, and M.S. and Ph.D. degrees in statistics from the University of Kentucky. He is widely published in statistical and applied journals and has participated in a number of symposia on issues in statistical consulting and statistical modeling. He has taught numerous short courses and workshops on generalized linear mixed models. A SAS user since 1975, Dr. Stroup is coauthor of SAS for Linear Models, Fourth Edition, SAS for Mixed Models, both editions. In addition, Dr. Stroup is author of Generalized Linear Mixed Models: Modern Concepts, Methods and Applications, an introduction to GLMMs that makes extensive use of SAS examples.

Rudolf J. Freund, Ph.D. former associate director and cofounder of the Department of Statistics at Texas A & M University, is now professor emeritus. Dr. Freund received an M.A. degree in economics from the University of Chicago in 1951 and a Ph.D. in statistics from North Carolina State College (now North Carolina State University) in 1955. He has coauthored several books including SAS System for Regression, Third Edition; Regression Methods; and Statistical Methods and Regression Analysis. Dr. Freund has been a SAS user since 1972, and is a former SUGI chairman.

Users Review

From reader reviews:

Ernestine Miller:

Have you spare time for any day? What do you do when you have much more or little spare time? Yep, you can choose the suitable activity with regard to spend your time. Any person spent all their spare time to take

a wander, shopping, or went to the particular Mall. How about open or maybe read a book titled SAS for Linear Models, Fourth Edition? Maybe it is being best activity for you. You realize beside you can spend your time with the favorite's book, you can more intelligent than before. Do you agree with their opinion or you have different opinion?

Kenny Grant:

What do you think about book? It is just for students as they are still students or that for all people in the world, the actual best subject for that? Just you can be answered for that question above. Every person has distinct personality and hobby for every other. Don't to be pressured someone or something that they don't wish do that. You must know how great as well as important the book SAS for Linear Models, Fourth Edition. All type of book are you able to see on many options. You can look for the internet sources or other social media.

Arthur Reaves:

The actual book SAS for Linear Models, Fourth Edition will bring that you the new experience of reading the book. The author style to clarify the idea is very unique. If you try to find new book to study, this book very suited to you. The book SAS for Linear Models, Fourth Edition is much recommended to you to study. You can also get the e-book through the official web site, so you can more easily to read the book.

Troy Cochran:

You are able to spend your free time to read this book this guide. This SAS for Linear Models, Fourth Edition is simple to deliver you can read it in the area, in the beach, train as well as soon. If you did not get much space to bring often the printed book, you can buy often the e-book. It is make you quicker to read it. You can save often the book in your smart phone. Consequently there are a lot of benefits that you will get when one buys this book.
